**ACTIVITY**

Anti-HIV; Viricide.

**MECHANISM OF ACTION**

HIV integrase and HIV replication inhibitors.

**USE**

In the treatment or prevention of infection by HIV; treating, preventing or delaying onset of AIDS (claimed) or AIDS related complications (ARC). The compounds are also useful in the preparation and execution of screening assay for antiviral compounds; for isolating enzyme mutants; and in establishing or determining the binding site of other antiviral to HIV integrase e.g. by competitive inhibition.

**ADVANTAGE**

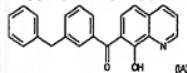

The compounds have highly specific inhibition capacity of HIV

| WO 200236734-A+|

integrase and HIV replication.

#### SPECIFIC COMPOUNDS

25 compounds are specifically claimed as (I) e.g. 1-(3-benzylphenyl)-1-(8-hydroxyquinolin-7-yl)methanone (1A)

#### ADMINISTRATION

The compounds are administered orally, parenterally (including subcutaneous injection, intravenous, intramuscular, intrasternal injection, or infusion). Dosage is from 0.1 - 1000 (especially 0.5 - 100) mg/kg body weight in divided form.

#### EXAMPLE

A septum was added to tert-butylamine (7.24 ml) in toluene (50 ml). The reaction was cooled to 78°C and bromine (1.69 ml) was added, stirred for 10 minutes followed by addition of 8-

hydroxyquinoline (5 g) in chloroform (10 ml). The addition mixture was stirred for 1 hour, warmed to ambient temperature, diluted with ethyl acetate (200 ml) and extracted. The organic extracts were dried, filtered and purified to give 7-bromoquinolin-8-ol (A). (A) (3.1 g), diisopropylamine (7.23 ml) and methyl chloride (100 ml) were added. MEM chloride (1.90 ml) was added and the reaction was stirred for 18 hours. After which another MEM chloride (0.95 ml) was added. This mixture was stirred for 1 hour, water (50 ml) was added and the organic solvent removed in vacuum. The residue was extracted, washed dried and filtered to give 7-bromo-8-(2-methoxyethoxyethoxy)-quinoline (B). (B) (0.765 g) and tetrahydrofuran (THF) (10 ml) were added in flask. The flask was cooled to -78°C and to it was added 1-butyllithium (3.6 ml of a 1.5M solution in pentane, 5.4 mmol). The reaction was stirred for 15 minutes then N-methyl-N-methoxy-3-benzyloxybenzencarboxamide (0.626 g) THF (5 ml) was added at 74°C. This mixture was stirred for 5 minutes, warmed to ambient temperature and the reaction was quenched by the addition of saturated aqueous NH<sub>4</sub>Cl. The solution was extracted, washed, dried and filtered to give 1-(3-benzylphenyl)-8-(2-methoxyethoxyethoxy)quinolin-7-yl)methanone (C). (C) (0.2 g).

2002-599296/64

reaction was stirred for 3 days, after which time it was poured into aqueous saturated NaHCO<sub>3</sub> (20 ml) and extracted, dried, filtered and purified to give 1-(3-benzylphenyl)-1-(8-hydroxyquinolin-7-yl)methanone.

#### TECHNOLOGY FOCUS

Organic Chemistry - Preparation - (I) are prepared by treating (II) with alkylolithium, followed by coupling of (II) with carboxylic derivative of (III) to provide ketone of formula (I).

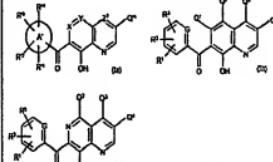

G<sup>1</sup> = alkyl;

Hal = halogen; and

G<sup>2</sup> = OH, alkoxy, halide, NMe(OMe).

Preferred Compound: The ketones are of formula (Ia) (preferably (Ib), especially (Ic)).

A' = phenyl, a fused carbocyclic ring selected from indan, 1-H indene, naphthalene, 1,2-dihydro-naphthalene, 1,2,3,4-tetrahydro-naphthalene, 6,7,8,9-tetrahydro-5H-benzocycloheptene, 6,7-dihydro-5H-benzocycloheptene, 9H-fluorene, anthracene, or 9,10-Dihydro-anthracene, 5- or 6-membered optionally saturated monocyclic heterocycle containing 1 - 4 N atoms, or 0 - 2 O or S atoms with at least one of the ring atoms being carbon (all optionally substituted by R<sup>1</sup> - R<sup>4</sup>);
